

VLOOKUP (Vertical Lookup)

Definition: Kisi bade table mein se data ko vertically (column-wise) dhundne ke liye use hota hai.

Use Case: Jab aapke paas Product ID ho aur aapko uska Price ya Name maloom karna ho.

How to Use: =VLOOKUP(lookup_value, table_array, col_index_num, \[range_lookup\])

Example: Agar Column A mein IDs hain aur Column B mein Names: =VLOOKUP("P-101", A1:B10, 2, 0) (Ye P-101 ka naam nikal kar de dega).

HLOOKUP (Horizontal Lookup)

Definition: Data ko horizontally (row-wise) search karne ke liye use hota hai.

Use Case: Monthly targets ya tax rates check karne ke liye, jahan mahine (Jan, Feb) upar row mein likhe hon.

How to Use: =HLOOKUP(lookup_value, table_array, row_index_num, \[range_lookup\])

Example: Agar Row 1 mein Months hain aur Row 2 mein Sales:
=HLOOKUP("Jan", A1:F2, 2, 0) *(Ye January ki sales nikal kar de dega).*

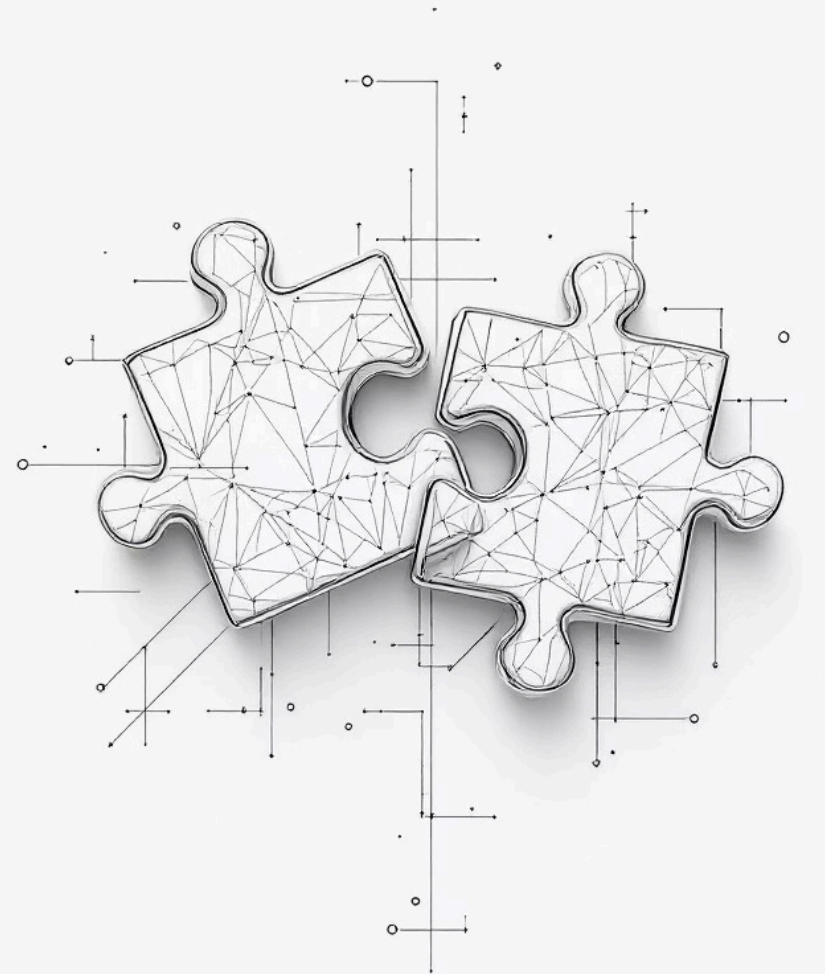

CONCATENATE / TEXTJOIN (Joining Text)

Definition: Do ya do se zyada cells ke text ko aapas mein jorne (combine) ke liye use hota hai.

Use Case: First Name aur Last Name ko mila kar "Full Name" banane ke liye.

How to Use: =CONCATENATE(text1, text2, ...) ya shortcut: =A1 & " " & B1

Example: A1: "Muhammad", B1: "Sarim" =A1 & " " & B1 □ Result: **Muhammad Sarim**

UPPER, LOWER & PROPER

Definition: Text ka case change karne ke liye (Bara ya Chota likhne ke liye).

Use Case: Data ki formatting set karne ke liye takay sara data ek jaisa dikhay.

How to Use: =UPPER(text) / =LOWER(text) / =PROPER(text)

Example: Cell A1 mein "sarim" likha hai: =UPPER(A1) □ Result: **SARIM**
=PROPER(A1) □ Result: **Sarim**

TRIM (Cleaning Text)

Definition: Text ke shuru ya aakhir mein majood faltu spaces ko khatam karta hai.

Use Case: Jab data kahin se copy kiya jaye aur usme extra spaces ki wajah se VLOOKUP kaam na kar raha ho.

How to Use: =TRIM(text)

Example: Agar cell mein " Apple " likha hai: =TRIM(A1) □ Result: "Apple"
(Extra spaces khatam).
